

Emmi Pet Teeth Cleaning

Emmi-Pet is a revolutionary dental hygiene treatment that is completely silent, non vibrational and gentle that works to prevent periodonitis, tooth loss, bad breath, plaque build up, inflamed gums and much more.

Emmi-Pet works 12mm below the gum line and strenghtens gum tissue as well as aiding a healing process.

It is estimated that by the time of 2 years old, 80% of dogs will display signs of oral disease.

Emmi-Pet works using ultrasonic waves that emits 96 million ultrasonic waves per minute from the head of the toothbrush via a small clip.

The waves are transferred via bristles of the toothbrush head in to Emmi-Pets specially formulated toothpaste. Micro bubbles are generated which then react with air vibrations and implode. These implosions elimtate and remove food particles, plaque, tarter and bacteria from within your dogs mouth.

This affordable treatment may lead to owners saving hundreds of euros in comparison to expensive veterinary bills.

Give your dog the gift of oral health and wellbeing.
